# 5MW Solar-Powered Container Terminals for Airports

## Overview

---

What is a solar-powered airport?

A fully solar-powered facility means the entire airport, starting from the air traffic control room, baggage claim, runway lights to passenger terminals, will work on solar power. The airport premises have a lot of vacant space that is being used to set up solar panels. The Asian Development Bank has agreed to fund the 'green airport' project.

Can solar power transform airports?

The transformation of airports through solar power goes beyond an environmental initiative—it demonstrates the potential of large-scale solar installations. By incorporating solar energy, airports can achieve significant energy cost reductions, with estimates ranging from 40-60%.

Are solar power systems paving the way for greener airports?

As airports around the world embrace solar energy, they are proving that large-scale renewable power systems are vital for the future of airport infrastructure. These advancements are paving the way for greener, more efficient airports globally, showcasing the transformative power of solar energy.

How many solar panels are in terminal one?

The airport's 8,705 solar panels are expected to supply 20% of the electricity used in Terminal One. The production capacity of the solar panel is 2 megawatts (MW), which is enough to provide enough electricity to as many as 250 households.
