American Communications 800m Base Station

Overview

What is included in the AC 800m controller family?

The AC 800M controller family includes a selection of communications modules that make it possible to access a wide range of field devices and third-party systems. The interfaces include::

What is AC 800m SNTP?

SNTP is a standardized protocol that typically is used by AC 800M controllers that need to be synchronized from an external time server (for example a GPS receiver) which is connected to the Control Network.

Can ci865 be used with AC 800m controller?

The CI865 module makes it possible to use older Satt I/O system (Rack I/O and Series 200 I/O) with the AC 800M controller platform, but it cannot be used as a general ControlNet interface. CI865 cannot be used in a High Integrity controller.

What is a ci869 AC 800m controller?

An AC 800M controller with the communication interface CI869 behaves as an AF 100 station, receiving data from other AF 100 stations/devices. The CI869 has integrated twisted pair modems. CI869 can also be used in an AC 800M High Integrity system.
