# Are there many solar panels installed

## Overview

---

How many solar panels are installed in the United States?

Behind the global leader, the United States ranks second in the largest number of the solar power panel installation, with roughly 239 GW installed by the end of 2024. Federal incentives like the Inflation Reduction Act and generous tax credits fueled a remarkable rise—solar accounted for about 66% of all new electricity capacity in the year.

Which country installs the most solar panels in the world?

China In 2024, China led the world—adding between 309 GW and 357 GW of solar capacity, which pushed its total beyond 1,000 GW, roughly half the world's installed PV systems . That massive scale explains why it holds the largest number of the solar power panel installation globally, dwarfing all other countries.

Are global solar installations on track for another record year?

Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 GW of new solar capacity — 64% higher than during the same period in 2024, when 232 GW were installed.

Are global solar installations breaking records again in 2025?

Global solar installations are breaking records again in 2025. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity – a staggering 64% jump compared to the same period in 2024, when 232 GW came online. China was responsible for installing a massive 256 GW of that solar capacity.
