

# BESS solar module price

## Overview

---

How much does a Bess system cost?

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

Is Bess a key driver of solar PV deployment & utilisation?

CEF considers BESS a key driver of increasing solar PV deployment and utilisation in the coming years — see Section 1.4. In 2024, the BESS market saw unprecedented growth.

How much does Bess cost in China?

It is nonetheless still eye-opening to note just how big those differences in cost are. The average for a turnkey system in China including 1-hour, 2-hour and 4-hour duration BESS was just US\$101/kWh. In the US, the average was US\$236/kWh and in Europe US\$275/kWh, more than double China's average cost.

Why are solar PV & Bess prices so low?

Global solar PV and BESS manufacturing is in severe overcapacity, driving record-low prices through intensified competition. China's dominance in both sectors is now unassailable, with its scale, integration, and cost advantages forcing market consolidation and straining manufacturers in the US, and EU.
