

Base station maintenance power module

Overview

What causes a base station to stop working?

Statistics from within the industry indicate that 65 percent of communications interruptions are caused by power supply failures, with 85 percent of them discovered after more than 12 hours, thanks largely to customer complaints. Other challenges to base station operation include heat, fire, flood, and theft.

Why are base stations important?

By Yang Ji Base stations are the key energy consumers on any mobile network; their monitoring and upgrade are essential if operators are to compete.

How do urban radio stations manage power & environmental management?

For urban radio sites, some operators use a multi-layer control system for their power & environmental management. Each city has a power & environmental monitoring system which reports to a higher-level monitoring center.

How does an MCU connect to a Base Transceiver Station (BTS)?

Through a specific channel for site operation and maintenance (O&M), operators can enjoy in-band networking from the MCU to the network operation center. If deployed for a typical 2G site, the MCU connects the O&M channel for the base transceiver station (BTS) through an RS485 serial port.

Base station maintenance power module

Lithium Iron Phosphate Battery Module 48V series 5G Base ...

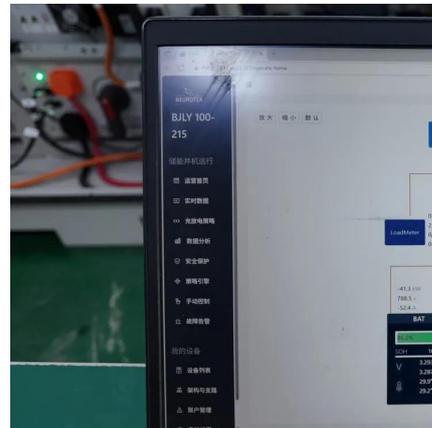

Introducing our Lithium Iron Phosphate Battery Module, the dependable 48V solution designed specifically for ensuring uninterrupted power supply to 5G base transceiver stations during ...
