# Bogota Environmentally Friendly Energy Storage Project

## Overview

---

Is Bogota a sustainable city?

Mayor Enrique Peñalosa said: “The goal of achieving a more sustainable and environmentally friendly city is fundamental given the Sustainable Development Goals (SDGs), the commitments made in the Paris Agreement and the vision of sustainability in Bogotá.

What is a pilot project in Bogota?

A pilot project has also been established which intends to have a positive impact on the rest of the city. The Partial Triangle Plan of Fenicia is a renovation project in Downtown Bogotá that is promoted by Universidad de los Andes (because it surrounds the campus) and the local government.

Are green policies feasible in Bogota?

Given the relative adolescence of green practices in this area in Bogotá, making policies which are both feasible and that have the correct verification will create the right incentives needed to shift the market towards greener behaviour.

Does Colombia have a Green Building Council?

Thankfully, there is a solution. And it comes in the form of a programme on which the Colombia Green Building Council (CCCS) is playing a major role. The UN’s Building Efficiency Accelerator (BEA) – led by the World Resources Institute – has an overarching commitment to double the rate of energy efficiency in buildings by 2030.
