

# Budget Proposal for a 15kW Solar-Powered Containerized Weather Station

## Overview

---

What is a solar weather station?

PV weather station designed for solar operation. The solar panels of the photovoltaic weather station are responsible for capturing solar energy and converting it into electrical energy to provide power for the entire weather station.

How does a photovoltaic weather station work?

The solar panels of the photovoltaic weather station are responsible for capturing solar energy and converting it into electrical energy to provide power for the entire weather station. The mounting bracket firmly supports the solar panel to ensure its orientation angle and better receive solar energy.

How much does a weather station cost?

For basic weather stations, budgets may range from a few thousand to tens of thousands of dollars, while annual maintenance costs may range from a few hundred to a few thousand dollars. Ensuring a good understanding of the needs and making detailed inquiries and quotes from weather equipment suppliers are key steps in obtaining an accurate budget.

Are solar weather stations a good investment?

Minimal Site Disruption: Because solar weather stations don't require power lines or extensive supporting infrastructure, their installation causes minimal disruption to natural environments, making them ideal for deployment in protected areas and sensitive ecosystems.
