

# Built-in energy storage power stations

## Overview

---

What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

What is the largest grid-forming energy storage station in China?

This marks the completion and operation of the largest grid-forming energy storage station in China. The photo shows the energy storage station supporting the Ningdong Composite Photovoltaic Base Project. This energy storage station is one of the first batch of projects supporting the 100 GW large-scale wind and photovoltaic bases nationwide.

What are the core functions of energy storage power stations?

In addition to these core functions, functions such as anti-backflow protection, support for parallel/off-grid operation, and islanding protection further enhance the reliability and versatility of energy storage power stations.

Are pumped-storage power stations a new investment hotspot in China?

Due to the demand for new energy installations, pumped-storage power stations have become a new investment hotspot in China's power industry. According to official data, by the end of 2024, China's installed pumped-storage capacity had exceeded 58 million kilowatts, with the industry showing an overall positive development trend.
