

# Can large shopping malls be equipped with energy storage

## Overview

---

Are shopping malls energy-saving?

Compared with other public buildings, shopping malls have large energy consumption and huge energy-saving potential. In the energy-saving design of shopping malls in our country, the energy-saving technology used by some building units has not been verified by the system. The air-conditioning system of shopping malls has the.

Do shopping mall buildings need energy conservation?

People's life is inextricably linked with energy, and energy will also have a significant impact on social stability. In view of the urgency of energy conservation and the huge consumption of energy in the building industry, this paper analyzes the current situation of energy conservation and technical improvement of shopping mall buildings.

How much energy does a shopping mall consume?

Shopping malls consume a significant amount of energy. On average, they use up to 650 kWh per square meter each year. This is due to the numerous energy-consuming devices found in malls, such as lights, escalators, electronic signage, charging stations, and more.

How can a shopping mall be energy-efficient?

The energy-efficient design of the building needs to reflect the relationship between the building and the environment. While considering the economic benefits, shopping malls should also consider the micro-climate environment, through a reasonable site selection, to improve the overall energy-saving effect of the building .
