

# Canberra Metro Station Uses Solar-Powered Containers for Two-Way Charging

## Overview

---

What is a solar powered shipping container?

At SCS Australia, we create solar powered shipping containers that combine renewable energy technology with the strength and mobility of a shipping container. These self-sufficient units are ideal for powering off-grid operations, mobile businesses, events, and remote projects—all while reducing carbon footprint and cutting energy costs.

Can I Opt in to solar two-way charging?

Yes, you can opt in to solar two-way charging, however you will see a \$0 solar export charge on your bill. More information about solar rates in your state.

Can solar energy be used in public transport?

With the nation's abundant sunlight and advanced solar technology, integrating solar energy into public transport infrastructure is more viable than ever. Cities like Adelaide and Brisbane are already taking bold steps in this direction, serving as models for the rest of the country.

How do solar charging stations work?

Solar panels are installed on the roofs of buses or trains. These generate electricity in real-time, charging batteries while the vehicle is in motion or parked. While promising, direct solar charging may not always produce sufficient energy for full operation, especially during cloudy days or at night.

2. Solar-powered charging stations
