

# China Telecom BESS Power Station

## Overview

---

Is a Bess project 'stable' in China?

A BESS project in China deployed by Hyperstrong, the largest system integrator in the domestic market. Image: Hyperstrong. China has reached well over 70GW of installed BESS capacity, while DC block prices appear to be 'stable', a local metals price agency said.

How much energy storage does Bess have?

Including all energy storage, its total installed capacity is now 137GW, meaning that 'new energy storage', mostly BESS, now exceeds its pumped hydro capacity. That is thanks to 43.7GW/109.8GWh of 'new energy storage' that was installed in 2024, CNESA said.

What is a battery energy storage system (BESS)?

Summary04 Introduction in Research ContactsEXECUTIVE SUMMARYA Battery Energy Storage System (BESS) secures electrical energy from renewable and non-renewable sources and collects and saves it in rechargeable batteries for use at a later date. When energy is needed, it is released from the BESS to power demand to lessen any.

What does 'new energy storage' mean for China?

Trade body China Energy Storage Alliance (CNESA) said last week (15 January) that 'new energy storage' capacity reached 78.3GW/184.2GWh by the end of 2024, a term it appears to use to describe technologies other than pumped hydro energy storage.
