

# China factory price battery storage Price

## Overview

---

How much does a battery cost in China?

For the first time, battery pack prices of less than \$100/kWh have been reported. These were for batteries in e-buses in China. While these were the lowest reported price, the volume-weighted average price for e-buses in China was slightly higher, \$105/kWh. Battery electric vehicle (BEV) pack prices are \$126/kWh on a volume-weighted average basis.

How much battery energy storage capacity does China have?

China currently has only about 3.3GW of battery energy storage capacity but it has plans for massive expansion.

What is the battery Cost Index (BCI)?

Note: the 'Table' references below relate to data that can be found in the 'Methodology' tab of the Excel sheet that accompanies the monthly BCI pdf. The Battery Cost Index (BCI) is a monthly report that provides detailed insights into the cost structure of various commercial Lithium-ion cells from January 2020 to the present.

What is the Fastmarkets cell cost model?

The Fastmarkets Cell Cost Model uses data from the BoM Library to produce monthly cell "should-cost" calculations, presented in the Cell Cost Section of the BCI. The model consists of two parts: (A) Materials Cost Calculation and (B) Manufacturing Cost Calculation.
