Construction of wind and solar complementary network base stations in China

Overview

Will China build a wind and solar power base in 2022?

According to a plan issued by the National Development and Reform Commission (NDRC) and the NEA in 2022, China will build wind and solar power bases with an installed capacity of 455 million kilowatts by 2030. China's southwest can support both hydro and wind power due to its varied landscape, comprising rivers and mountains.

Does China have a potential for hydro-wind-solar complementary development?

China has made considerable efforts with respect to hydro- wind-solar complementary development. It has abundant resources of hydropower, wind power, and solar power and shows promising potential for future development.

How is hydro-wind-PV complementation achieved in China?

At present, most hydro-wind-PV complementation in China is achieved by compensating wind power and PV power generation by regulating power sources, such as a unified dispatch of hydropower and pumped-storage power stations on the grid side.

How will China's new power base work?

All projects at the base are scheduled to be put into operation within China's 14th Five-Year Plan (2021-25) period. Once operational, the base is expected to export 24 billion kWh of power annually to East China's Shandong Province through the ultra-high-voltage power transmission line.

Construction of wind and solar complementary network base station

Xuyuan Guo Sept. 2023

Nov. 2022, the Jinping Hydro and Solar Complementary Solar Project (1.17 GW) has been filed for approval. On June 25, 2023, the first phase of the largest and highest-altitude ...
