# Curtain wall double glass components

## Overview

---

What are glass curtain walls?

Glass curtain walls are lightweight aluminum-framed facades housing glass panels. These glazing systems don't support the weight of a roof or floor. Instead, gravity loads and wind resistance transfer from the surface to the building's floor line. Curtain walls are often part of a building envelope or comprises one part of a wall system.

What are structural glazed curtain wall systems?

Structural glazed curtain wall systems are a type of unitized system that is structurally self-supporting. They are made from large glass panels held in place by structural silicone joints, providing a seamless and uninterrupted view of the outside environment.

What is a double-layer glass curtain wall (rdgcw)?

A DSF with the natural ventilation mode is called a respiration-type double-layer glass curtain wall (RDGCW). Because the RDGCW is easy to construct and maintain, it is used more widely used in China than the forced ventilation or mixed ventilation. However, the airflow entering the air gap of the RDGCW is extremely unstable.

What is curtain wall glazing?

The curtain wall method of glazing enables glass to be used in large, uninterrupted areas of a building envelope, creating consistent, attractive facades.
