

Danish solar system

Overview

How much solar does Denmark have in 2024?

The nation added 545 MW of solar last year, up from 378 MW in 2023 but down from more than 1 GW in 2022. The new additions bring Denmark's total solar capacity to more than 4 GW. Utility-scale installations drove Denmark's solar growth in 2024, with projects over 1 MW adding 356 MW, said Dansk Solcelleforening.

Why is solar energy important in Denmark?

Solar energy, therefore, plays a key role in realizing Denmark's ambition of covering our net electricity consumption with 100% renewable energy by 2030. Every quarter, the Danish Energy Agency publishes a solar PV inventory describing the status of the expansion of solar PV in Denmark.

Can solar energy be harnessed in Denmark?

There is great potential for harnessing solar energy in Denmark. At the same time, the costs associated with producing electricity from solar PV (photovoltaics) have dropped significantly in recent years, and solar PV are now one of the most cost-effective and competitive ways of producing electricity.

How many solar PV installations are there in Denmark?

The latest version can be found below and shows a total expansion of solar PV in Denmark of more than 3.3 GW as of 1 July 2023. The installations consist of both large installations in the open country as well as smaller installations, mainly on rooftop. Solar PV Statistics 2nd quarter 2023 (Only available in Danish)
