

# Does solar glass production affect fertility

## Overview

---

How does the sun affect fertility?

Getting some extra sun can help enhance your fertility. Sunlight affects the level of the hormone melatonin and a key vitamin we'll discuss in a minute, both of which have a role in regulating women's reproductive cycles.

Is sunlight good for fertility?

The same research found that women undergoing IVF who had been exposed to sunlight and soaring temperatures among other environmental factors the month before had a 1/3 higher pregnancy rates! Getting some extra sun can help enhance your fertility.

How is glass affected by electromagnetic radiation?

Glass is affected by electromagnetic radiation of different wavelengths from the sun, which is partly absorbed, reflected, and transmitted. Any glass surface depending on the type of glass and the process to which it has been treated can filter light and heat into the environment in a different way.

Is Sunshine good for fertility?

Remember: even before conception, more sunshine can boost your fertility and increase your odds of pregnancy. Research shows that vitamin D is a factor in improving egg quality, IVF implantation rates, and-of course-successful pregnancy outcomes. Plus, melatonin helps control the timing of female menstrual cycles.
