

Double glass module anti-PID

Overview

The double glass modules with 0-permeable toughened glass instead of without rim encapsulation advantages show long-term anti-PID advantages compared with conventional modules under high voltage co.

What is a double-glass solar module?

ABSTRACT: Double-glass modules provide a heavy-duty solution for harsh environments with high temperature, high humidity or high UV conditions that usually impact the reliability of traditional solar modules with backsheets material.

What is a double glass module?

The double glass module design offers not only much higher reliability and longer durability but also significant Balance of System cost savings by eliminating the aluminum frame of conventional modules and frame-grounding requirements. The application of double-glass modules covers multiple markets including utility, residential and commercial.

What is a double glass c-Si PV module?

Recently several double-glass (also called glass-glass or dual-glass modules) c-Si PV modules have been launched on the market, many of them by major PV manufacturers. These modules use a sheet of tempered glass at the rear of the module instead of the conventional polymer-based backsheet. There are several reasons why this structure is appealing.

Why are double-glass modules important?

Double-glass modules have increased resistance to cell micro-cracking, potential induced degradation, module warping, degradation from UV rays, and sand abrasion, as well as alkali, acids or salt mist.

Double glass module anti-PID

Anti-PID Low LID JAM72D40MB , 580-605W N-Type Bifacial , Double Glass

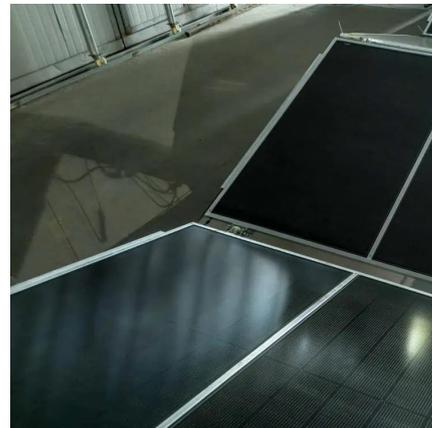

Anti-PID Low LID JAM72D40MB , 580-605W N-Type Bifacial , Double Glass Mono Module for Harsh Environments No reviews yet Jiangsu Jingxun Energy Co., Ltd. Multispecialty Supplier
