

# Flywheel Energy Storage in Asian Power Plants

## Overview

---

What is China's largest flywheel energy storage plant?

China's massive 30-megawatt (MW) flywheel energy storage plant, the Dinglun power station, is now connected to the grid, making it the largest operational flywheel energy storage facility ever built.

Are flywheel energy storage systems environmentally friendly?

Flywheel energy storage systems (FESS) are considered environmentally friendly short-term energy storage solutions due to their capacity for rapid and efficient energy storage and release, high power density, and long-term lifespan. These attributes make FESS suitable for integration into power systems in a wide range of applications.

Where is China's first large-scale flywheel energy storage project located?

China has successfully connected its 1st large-scale standalone flywheel energy storage project to the grid. The project is located in the city of Changzhi in Shanxi Province. The power output of the facility is 30 MW and it is equipped with 120 high-speed magnetic levitation flywheel units.

Which country has the largest flywheel energy storage system?

Previously, the largest flywheel energy storage system was the Beacon Power flywheel station in Stephentown, New York, with a capacity of 20 MW. Now, with Dinglun's 30 MW capacity, China has taken the lead in this sector. Flywheel storage technology offers several advantages over conventional energy storage methods.
