Greek solar and wind power generation systems

Overview

Why does Greece have a high wind and solar potential?

Due to its geographical position and shape, Greece has a very high wind and solar potential (especially at the eastern part of the country), and the western part has a significant hydro potential (mainly at the west) that is already being exploited.

How much wind power does Greece have in 2023?

The total installed wind power capacity in Greece at the end of 2023 reached 5,226 MW, (an 11.6% increase compared to end of 2022). The total new capacity installed in Greece in 2021 was 543 MW, well above the 10-year average.

Does Greece have a CT of wind energy?

It is worth noting that although offshore wind development in Greece is in its early planning stage, three companies based in Greece already have substantial activity in the global offshore.

How does wind energy affect the environment in Greece?

Wind energy produced 11,000 GWh of electricity in 2023 covering 21% of the annual electricity demand in Greece, while offsetting the equivalent of 2.3 million tons of CO2 emissions. The volume of avoided CO2 emissions is equal to the emissions of 80% of private cars in Greece.

Greek solar and wind power generation systems

[Greece Renewable Energy projects 2024](#)

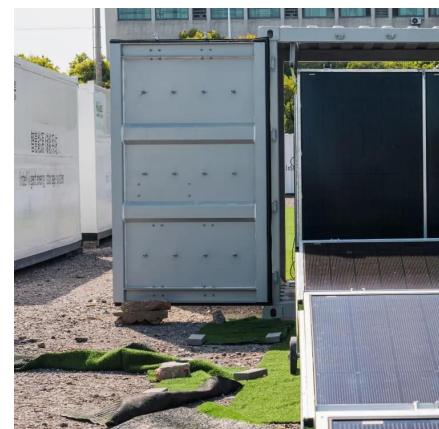

In recent years, Greece has significantly increased its renewable energy (RES) production and consumption, hitting a record high in 2023 in wind, solar and hydroelectric ...
