

Hit solar panels

Overview

What are hit solar panels?

These solar panels have an attractive uniform black color. SANYO silicon wafers located inside HIT solar panels are made in California and Oregon (from October 2009), and the panels are assembled in an ISO 9001 (quality), 14001 (environment), and 18001 (safety) certified factory. Unique eco-packing minimizes cardboard waste at the job site.

Where are hit solar panels made?

SANYO silicon wafers located inside HIT solar panels are made in California and Oregon (from October 2009), and the panels are assembled in an ISO 9001 (quality), 14001 (environment), and 18001 (safety) certified factory. Unique eco-packing minimizes cardboard waste at the job site.

Why should you choose a hit solar panel?

High Efficiency: The unique heterojunction technology ensures that these panels have a high energy conversion efficiency, helping you to get the most out of the sunlight your panels capture. **Excellent Performance in High Temperatures:** Unlike some other types of solar panels, the HIT series is designed to perform well even in high temperatures.

Why should you choose a Panasonic hit solar panel?

Excellent Performance in High Temperatures: Unlike some other types of solar panels, the HIT series is designed to perform well even in high temperatures. **Longevity:** Panasonic's solar panels are designed for durability and can continue to perform well for many years.

Hit solar panels

[Panasonic HIT solar panels: Unique Rooftop Design Launched](#)

The HIT® solar panels feature a sleek, low-profile design that integrates seamlessly into modern urban landscapes. They are protected by a thin-film coating that ...
