

# **How many layers does the bottom plate of the new energy battery cabinet have**

## Overview

---

How to design ESS battery enclosure?

Normally, one ESS Battery case consists of top cover, lower case, cooling plate, frame panel, beams and bottom plate. The design of battery enclosures should be based on the overall spatial structure and layout of the energy storage system.

What are the basic building blocks of an EV battery?

**The Basic Building Blocks:** Cells A cell is the smallest unit of the battery, similar to a tiny battery itself. Inside each cell, chemical reactions generate electricity. Most EV cells use lithium-ion materials, which are excellent for storing energy. A single cell doesn't produce enough power for a car, so many cells are combined.

What makes up an EV battery?

Let's explore the key elements that make up an EV battery.

- 1. Battery Module Array:** The battery module array consists of multiple cells, which are grouped into modules and then assembled into a battery pack. This structure stores and delivers energy to power the vehicle.

What is battery enclosure?

Battery enclosure is also known as the battery box (battery housing / battery tray) and is one of the most important components in Battery Pack. It provides a space, which is mechanically strong and water-dust proof, for battery cells, thermal management systems, BMS and so on.
