How to configure the base station power module

Overview

How do I configure a base station?

As shown in below, there are two methods to configure the base station. You can enter the relevant configuration command in the Input area using one of the methods to configure the base station. For C2-M20, please use the Step-by-Step configuration method (COM32 serves as the control port, and COM1 serves as the RTCM output port.). port.

How do I connect a base station to a network?

1. Connect the base station power and the network using method a or method b. a. AC Power Option b. PoE (Power over Ethernet) Option If you choose method a, use Yealink supplied power adapter (5V/0.6A). A third-party power adapter may damage the base station. If you choose method b, you do not need to connect the power adapter.

How many lbbp boards can be configured in a base station?

The number of LBBP boards to be configured in a base station that supports LTE depends on the number of cells, bandwidths, antenna configurations, and the number of CPRI ports to be supported by the base station. Each BBU working in LTE mode needs to be configured with at least one LBBP and each LBBP supports six RF modules.

How do I configure a rover station?

As shown below, there are two methods to configure the rover station. You can enter the relevant configuration command in the Input area using one of the methods to configure the rover station. For C2-M20, please use the Step-by-Step configuration method (COM3 serves as the control port, and COM1 serves as the RTCM input port.).
