Indian energy storage power supply procurement site

Overview

How many energy storage systems will India need by 2023?

According to the National Electricity Plan 2023, India will require 74 GW/411 GWh of energy storage systems (ESS) by 2031-32, including 27 GW/175 GWh from PSPs and 47 GW/236 GWh from Battery Energy Storage Systems (BESS). Procurement models Mode 1: PSPs developed on sites identified by the procurer.

What is India's energy storage mandate?

This mandate requires that 1% of total electricity consumption in FY 2023-24 be sourced from storage resources, with a planned increase to 4% by FY 2030, translating to a national storage requirement of INDIA ENERGY AND CLIMATE CENTER |69 200-250 GWh, assuming daily cycling.

Does India need energy storage?

- Significant Energy Storage Needed for Grid Stability: India will need 61 GW/218 GWh of energy storage by 2030 and 97 GW/362 GWh by 2032 to ensure grid reliability. Battery storage will lead, though pumped hydro may gain ground if battery prices do not fall as anticipated.

What are the key aspects of energy storage in India?

This study, through comprehensive grid simulations, examines key aspects of energy storage in India, including required capacity, optimal locations, duration, technologies, costs, and policy framework, to meet growing electricity needs in a least-cost manner, while preventing the stranding of thermal assets.

Energy Storage Association in India

Given the increasing complexity of power systems due to variable renewable energy sources and rising energy demands, long-duration energy storage is becoming increasingly important. The Indian government has set a target of 50 GW of battery storage by 2030, and several state-owned power companies are already investing in large-scale battery storage projects.
