

Ireland container emergency power generation equipment

Overview

What is a containerised generator?

Our Containerised Generators deliver robust, high-capacity power from 300–3,000 kVA in secure, weather-resistant enclosures. Designed for challenging environments and critical applications, they offer noise reduction, easy transport, and bespoke configuration to meet your site's exact needs.

What is temporary emergency generation (TEG)?

As one of the actions under this programme, Temporary Emergency Generation ('TEG') has been procured and installed under the direction of Government and the CRU, pursuant to the provisions in the Risk Preparedness Plan for Ireland (the 'RPP') and the EirGrid, Electricity and Turf (Amendment) Act 2022 .

How many MW of gas-fired Teg are there in Ireland?

In December 2023, 193 MW of gas-fired TEG was connected to the system at North Wall, Dublin. This plant can be at full output within 15 minutes and can supply 3% of Ireland's peak demand. A further 224 MW of TEG is available to operate at our site in Shannonbridge, Co. Offaly, since August 2024.

Is Ireland facing a 'Energy Trilemma'?

Utilities and policymakers around the globe are confronted by an 'energy trilemma', as they try to deliver on three fronts: improve energy sustainability through decarbonisation, ensure security and reliability of energy supply, while minimising consumer costs. Ireland faces these same challenges.
