

# Lnvelox wind power generation system

## Overview

---

What is INVELOX wind power capturing system?

The INVELOX attained 11.9 m/s wind speed at venturi section that is 6–8 times more power than traditional wind energy. The INVELOX system produced more power as compared to traditional wind turbines. 6 The funnel-based wind power capturing system developed with propeller blade having diameter of 7 cm that coupled with generator for producing power.

What is INVELOX wind turbine?

Vinay C, Desai S and Kulkarni P. CFD analysis on INVELOX, a new concept in wind power. International 1–6. INVELOX wind turbine, a new concept in harnessing wind energy, has renewed the duct wind turbine concept and tried to shatter the barriers to offer better performance with lower costs.

Why is INVELOX a good solution for commercial renewable power generation?

Turbine performance was enhanced from 300 to 3600 W due to amplified wind speed and higher power coefficient when turbine was mounted in the venturi section of INVELOX. 10 INVELOX is better solution for optimizing efficiency in commercial renewable power generation implementation.

How does INVELOX differ from traditional ducted turbines?

In contrast to older designs of traditional ducted turbines, INVELOX separates the location of the intake, shroud and turbine-generator system; the intake is on the top while the turbine-generator system is placed at ground level inside the narrowest section of the ducted pipe carrying captured wind towards the turbine.

## Invelox wind power generation system
