

New Energy Station Battery Replacement Process

Overview

How does a battery swapping station work?

The swapping stations use slow charging to recharge the battery packs, which helps extend the lifecycle of the power batteries. Retired power batteries are collected by battery recycling companies, with batteries that meet the performance requirements for energy storage systems being used there.

How long does it take to replace a car battery?

When drivers pull into a station, a tap on the dash screen triggers a robotic arm to remove the vehicle's battery pack and replace it with a fully charged one from the inventory. The process takes just 144 seconds—22% faster than the third-generation swapping stations. "Both speed and capacity are brought to the next level," Nio says.

How many battery swap stations are there in China?

One of the most notable pioneers in this space is Nio, a Chinese electric car manufacturer, that has made battery swapping a cornerstone of its business model. As of June 2024, Nio had installed 2,432 power swap stations in China, including 804 swap stations based on highways.

What is NIO Power Swap station 4.0?

The first batch of NIO Power Swap Station 4.0 went live. The fourth generation supports automated battery swap for multiple brands and different vehicle models. NIO, ONVO and all battery swap strategic partners can access the new stations for a comprehensively elevated battery swapping experience that is more convenient than gas refueling.
