

# New Zealand solar cell modules

## Overview

---

How many solar panels are installed in New Zealand?

In October 2022, Electricity Authority data showed 43,641 solar systems installed across New Zealand, adding up to 240 MW. This makes up an estimated contribution of under 1% of total electricity consumption. Globally, solar PV uptake has increased significantly over the past decade.

What is solar energy in New Zealand?

Learn about solar energy in New Zealand, and its advantages and limitations. In October 2022, Electricity Authority data showed 43,641 solar systems installed across New Zealand, adding up to 240 MW. This makes up an estimated contribution of under 1% of total electricity consumption.

Does New Zealand use solar?

Globally, solar PV uptake has increased significantly over the past decade. While uptake in New Zealand has been slower to date, there is potential for greater utilisation as technology costs decrease, particularly at the grid-scale and on commercial building rooftops. How much of our electricity comes from solar?

2021 data is sourced from MBIE.

Does New Zealand have a solar market?

However, the New Zealand solar market has obstacles to navigate, with the country having some of the lowest penetration rates for rooftop solar. Gillies highlights that only 3% of New Zealand households have solar PV modules, whereas its neighbour, Australia, has 40%.
