# **Owners resist installing uninterrupted power supply for solar container communication stations**

## Overview

---

Can a remote base station power supply be uninterrupted?

By Zhang Hongguan & Zhang Yufeng Uninterrupted power supply for remote base stations has been a challenge since the founding of the wireless industry, but alternative sources have a chance of succeeding where traditional solutions have failed.

Can off-the-grid energy solutions help remote base stations?

Uninterrupted power supply for remote base stations has been a challenge since the founding of the wireless industry, but alternative sources have a chance of succeeding where traditional solutions have failed. With users no longer tolerating spotty coverage in the great outdoors, the need for off-the-grid energy solutions is ever growing.

How does a solar power supply work?

Solar or power grid electricity powers the base station and charges the batteries, with solar having priority. Only when neither proves sufficient will the batteries be utilized. Huawei's PowerCube hybrid power supply solution has been widely recognized for its remote-station viability.

What happens if a base station doesn't get enough sunlight?

When sunlight is not sufficient, the batteries will take over. Considering that remote base stations must be highly-integrated, inexpensive, and modest, Huawei has developed its all-on-pole EasySite solution, which integrates the base station, antennas, transmission, and tower into one convenient package.

## Owners resist installing uninterrupted power supply for solar conta

### [Commercial use of solar container batteries for ...](#)

Uninterrupted power supply for photovoltaic 5g communication base stations Base station operators deploy a large number of distributed photovoltaics to solve the problems of high ...
