

# Peak regulation income of Malabo energy storage power station

## Overview

---

What are the limitations of a distributed power generation system?

In addition, the operation of equipment for distributed power generation is limited by the energy consumption, external environment, and other constraints, resulting in an idle or redundant energy supply capacity.

How can energy storage system reduce the cost of a transformer?

Concurrently, the energy storage system can be discharged at the peak of power consumption, thereby reducing the demand for peak power supply from the power grid, which in turn reduces the required capacity of the distribution transformer; thus, the investment cost for the transformer is minimized.

Can fesps reduce energy storage capacity?

Compared to the traditional systems for shared energy storage without power flow regulation, the developed FESPS can significantly reduce the capacity of energy storage equipment, as demonstrated in Eq. (15).

What time does the energy storage power station operate?

During the three time periods of 03:00-08:00, 15:00-17:00, and 21:00-24:00, the loads are supplied by the renewable energy, and the excess renewable energy is stored in the FESPS or/and transferred to the other buses. Table 1. Energy storage power station.

## Peak regulation income of Malabo energy storage power station

### [Solar energy storage peak load regulation power station ...](#)

On the generation side, studies on peak load regulation mainly focus on new construction, for example, pumped-hydro energy storage stations, gas-fired power units, and energy storage ...
