

# Photovoltaic Energy Storage Container Long-Term Model 2026

## Overview

---

Will global storage capacity expand by 56% in 2026?

Global installed storage capacity is forecast to expand by 56% in the next five years to reach over 270 GW by 2026. The main driver is the increasing need for system flexibility and storage around the world to fully utilise and integrate larger shares of variable renewable energy (VRE) into power systems. IEA. Licence: CC BY 4.0.

How will global electricity storage capacity grow in 2026?

Addressing global electricity storage capabilities, our forecast expects them to increase by 40% to reach almost 12 TWh in 2026, with PSH accounting for almost all of it. India dominates storage capability expansion by commissioning over 2.5 TWh (80% of the expansion) thanks to projects using existing large reservoirs.

What is the optimal capacity allocation model for photovoltaic and energy storage?

Secondly, to minimize the investment and annual operational and maintenance costs of the photovoltaic–energy storage system, an optimal capacity allocation model for photovoltaic and storage is established, which serves as the foundation for the two-layer operation optimization model.

What is installed capacity of photovoltaic and energy storage?

And the installed capacity of photovoltaic and energy storage is derived from the capacity allocation model and utilized as the fundamental parameter in the operation optimization model.
