

Policy on mandatory energy storage for wind and solar power generation

Overview

How will the energy storage mandate impact China?

S&P Global estimates that the storage mandate has driven between 50 and 75% of domestic demand. With China accounting for around 56% of the global energy storage demand in 2024, the impact of such a policy change will be massive.

Is the energy storage mandate a big change?

This is a big change towards rationalization of renewables but hidden within that is a removal of the energy storage mandate,” George Hilton, research and analysis manager at S&P Global, tells ESS News. S&P Global estimates that the storage mandate has driven between 50 and 75% of domestic demand.

What policies support wind energy?

Several different policy strategies have promoted wind energy. Such supports for onshore wind have typically appeared in the form of feed-in tariffs (for reference, in Europe), tax subsidies, and quotas and duties (for instance, in India and the US), however, it is shifting more and more towards auctions worldwide.

Can energy storage control wind power & energy storage?

As of recently, there is not much research done on how to configure energy storage capacity and control wind power and energy storage to help with frequency regulation. Energy storage, like wind turbines, has the potential to regulate system frequency via extra differential droop control.

Policy on mandatory energy storage for wind and solar power generation

[China emerging as energy storage powerhouse](#)

China's power storage capacity is on the cusp of growth, fueled by rapid advances in the renewable energy industry, innovative technologies and ambitious government policies aimed at driving ...
