

Pwm emergency communication command base station

Overview

What is the current emergency communication command?

The current emergency communication command mainly relies on communication infrastructure and is supplemented by emergency communication vehicles as well as the use of satellite networks, shortwave networks and trunking communication networks to provide the same communication services.

What is integrated space-air-ground emergency communication command?

The integrated space-air-ground emergency communication command is designed to use advanced satellite communication technology, aerial unmanned platform communication technology, ground-based self-assembling network technology and public network technology, etc.

Why are conventional communication facilities unable to respond to emergencies?

Damage to electrical installations, disruptions to public networks and damage to roads also make conventional communication facilities unable to meet the demanding needs of emergency response.

What is an incident command system?

The incident command system proposed by the United States is the current international mainstream command system architecture, covering the common construction ideas and functional structure methods of the emergency rescue command system (Lee & Edmondson, 2017).
