

# Solar container battery air transport in Mexico

## Overview

---

Will Mexico colocate battery energy storage systems?

Future wind and solar energy projects in Mexico will be required to colocate battery energy storage systems equivalent to 30% of their capacity, a senior government official told the Senate on Tuesday.

Does Mexico have a 30% energy storage mandate?

A month after India introduced an energy storage mandate for renewable energy plants and China scrapped its own, Mexico has stepped forward with an ambitious 30% capacity requirement, alongside plans to add a further 574 MW of batteries by 2028.

Will Mexico develop energy storage technologies in the next decade?

However, we expect Mexico to develop its energy storage technologies significantly over the next decade, as well as its lithium mining industry, as it increases its renewable energy capacity as part of a global green energy transition.

Why is Mexico developing a hybrid solar power plant?

In response to more frequent blackouts, Mexico recently developed hybrid plants that have both a solar power generating capacity and battery storage capabilities. As Mexico expands its solar market, we expect companies to increase their investment in battery storage operations to optimize the solar power generated across the country.
