

Solar glass is also laminated glass

Overview

Does laminated glass block UV rays?

Laminated glass can block more than 99% of UV rays because plastic interlayers between single panes of glass absorb UV radiation. Take a look at how solar control glass and laminated glass – either individually or combined – help to maintain a comfortable home, with views and natural light and reduce the risk of overheating and faded furniture.

What is laminated glass?

Most of us are already familiar with laminated glass; it is the same type of glass that is used to make windshields of cars. The difference, however, is that with hurricane impact resistant products is that the manufacturers use a special film interlayer and a thicker sandwich of glass to make the impact glass a lot stronger.

Does window glass reduce solar heat?

Fortunately, there are window glass products that can help protect your home while allowing natural light to enter. There is one key factor that affects a window's ability to reduce the amount of solar heat inside the home: the glass composition.

What is solar control glass?

Solar control glass products for the home specialize in reducing the risk of interiors overheating, while allowing you to retain clear views. The glass composition is the key factor to reduce the possibility of color fade on curtains, furniture and other material.

Solar glass is also laminated glass

[Laminate/Insulated Glass , PV Solar Glass](#)

Insulated glass panels Solar cells laminated between two sheets of glass + air gap + tempered glass Increase energy efficiency and reduce heating and cooling costs Maximum ...
