

Solar glass roof shading

Overview

What are photovoltaic sun shading systems?

Integrated energy generation and shading: Unlike traditional materials, photovoltaic sun shading systems provide not only shade but also generate renewable energy. These systems create a more efficient, sustainable solution by transforming passive architectural elements into active energy producers while controlling solar heat gain.

How does a solar shading system work?

These louvers are controlled by sensors and AI algorithms, enabling real-time adjustments that minimize glare and reduce solar heat gain. This dynamic shading system is designed to reduce cooling loads by up to 40% and optimize natural lighting, cutting down on artificial lighting consumption by 30%.

What is dynamic solar shading?

Dynamic solar shading technologies represent a pivotal advancement in facade engineering, combining scientific principles with cutting-edge innovations to address glare reduction and energy efficiency.

What is a Shadovoltaic Solar System?

Shadovoltaic is a fixed or controllable external glazed solar shading system that may be installed either vertically or horizontally in front of the facade. Photovoltaic cells are integrated into the glass so as to generate electricity.

Solar glass roof shading

Photovoltaic Glass for Sunshading , Vitro Architectural Glass

The Solarvolt (TM) BIPV glass system by Vitro Architectural Glass not only captures sunlight and generates energy but also protects against the sun and resulting glare. Solar sunshading ...
