

# Solar glass yarn

## Overview

---

What is a perovskite solar yarn?

A flexible perovskite solar yarn with an impressive active lifetime (>216 h) and an exceptional photon conversion efficiency is prepared under ordinary conditions. The champion device demonstrates an average linear mass density of  $0.89 \text{ mg cm}^{-1}$  and can be bent over a loop diameter of 2.5 mm, with a negligible efficiency loss.

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

How much power does a double twisted yarn generate?

An individual double-twisted solar yarns yields 15.7% champion power conversion efficiency, while a  $30.5 \text{ mm} \times 30.5 \text{ mm}$  active area of plain-woven fabric generates a maximum power density of  $1.26 \text{ mW cm}^{-2}$  under one sun ( $1000 \text{ W m}^{-2}$ ) solar illumination. The authors declare no conflict of interest.

What makes Almaden solar glass unique?

Almaden is recognized for its technological innovation in solar glass coating. As a leading manufacturer in the photovoltaic glass industry, Almaden's anti-reflective coating solar glass has positioned the company at the forefront of the market.
