

# Solar panels for direct home use

## Overview

---

What is a residential solar system?

Residential solar systems utilize photovoltaic (PV) panels to convert sunlight into electricity, powering your home with renewable energy. These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage.

Do solar panels produce more energy than a home needs?

Solar panels can produce more energy than your home needs. In that case, the extra solar energy can be sent back to the utility grid or stored in a battery system for later use. There are three main types of solar power systems: grid-tied, hybrid, and off-grid systems, which we explain in the videos below. How do grid-tied solar systems work?

.

Which solar panel is best for home use?

This way, you can get the best price for your new system. Which type of solar panel is best for home use?

Generally speaking, monocrystalline panels are the best option for home use. However, polycrystalline and thin-film panels can be good options depending on the size of the system and other factors specific to you.

What is a solar PV residential system?

These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage. The solar PV residential systems can power your home directly, store energy for later, or send excess energy back to the grid.
