

Solar power generation system installed in Chile

Overview

What is a solar power project in Chile?

The project, to be completed in 2010, seeks, among other goals, to improve quality of conventional electricity services and to promote off-grid and renewable energy solutions, such as generators, solar panels and wind turbines. The Inter-American Development Bank has provided funding for three active electricity-related projects in Chile.

How big is Chile's 230 megawatt solar project?

The 230-megawatt project, with a storage volume of 920 megawatt-hours, is designed for 4-hour operation and slated to be launched in 2027. Experts point out that the joint development of solar generation and energy storage is becoming vital to Chile, especially given the growing production volumes and limited grid capacity.

Can solar technology be developed in the north of Chile?

The Atacama Desert in the North of Chile has one of the highest rates of solar radiation in the world, making it an ideal location for the development of solar technologies. This represents a sensible alternative to overcome the barriers the mining industry faces.

How many ground-mounted solar projects are in Chile?

Since making their initial investment in Chile in 2017, CC&L Infrastructure and CarbonFree have significantly expanded their portfolio, with 37 individual ground-mounted solar projects in operation and a further 16 projects currently under construction or expected to begin construction shortly.

Solar power generation system installed in Chile

Latin America's largest solar power complex launched in Chile

The first two phases of Oasis de Atacama, the largest solar power and energy storage project in Latin America, have come on stream in Chile's Antofagasta Region. As part ...
