

# Tbilisi solar Conductive Glass

## Overview

---

What are conductive glasses?

Conductive glasses are optically transparent and electrically conductive in thin layers on glass using conductive coatings. Conductive Glass applications are made-up from both inorganic and organic materials.

Are tec15 glass plates conductive?

The FTO- coated glass plates are ideally suited as glass substrates for perovskite devices and dye sensitized solar cells (Abd Mutalib et al., 2022; Hiltunen et al., 2022). The sheet resistance of the conductive coating in TEC15 glass plates is approximately 15Ω/sq. Glass plates over 5 sheets pack are available but freight costs will vary.

Why is TCO glass used in photovoltaic solar cells?

In recent years, with the development of thin film solar cells, photovoltaic TCO glass as a pole of various thin film solar cell front panels and batteries, has become a popular high-tech coated glass products. 1.High transmittance, absorb more sunlight and improve photoelectric conversion efficiency.

What is Solar Photovoltaic Glass?

This article explores the classification and applications of solar photovoltaic glass. Photovoltaic glass substrates used in solar cells typically include ultra-thin glass, surface-coated glass, and low-iron (extra-clear) glass.
