# The development prospects of solar curtain walls

## Overview

---

What is the annual power generation of photovoltaic curtain walls?

Annual power generation of photovoltaic curtain walls on different facades of buildings. According to the characteristics of photovoltaic modules, the attenuation rate of photovoltaic modules is around 2% in the first year, and the average annual attenuation rate from the following year is around 0.6%.

Do photovoltaic curtain walls improve the cost-effectiveness ratio?

After sensitivity analysis of the cost of photovoltaic curtain walls and the efficiency of solar panels, it was found that as the cost increases, the economy of photovoltaic curtain walls gradually deteriorates, and improving the efficiency of solar panels can improve the cost-effectiveness ratio of each facade.

Can photovoltaic curtain wall array be used in building complexes?

Xiong et al. [ 31] develops a power model for Photovoltaic Curtain Wall Array (PVCWA) systems in building complexes and identifies optimal configurations for mitigating shading effects, providing valuable insights for the application of PVCWA systems in buildings.

How much power does a photovoltaic curtain wall generate?

Based on Table 7 and Table 8, the annual and total power generation data for the photovoltaic curtain walls on different facades can be obtained. The south facade's photovoltaic curtain wall has the highest power generation capacity, with a cumulative power generation of 17,730.42 MWh over a 25-year period.
