

The largest battery energy storage power station in Rotterdam the Netherlands

Overview

Where is the Netherlands' largest stand-alone battery energy storage system located?

Dispatch, a Dutch battery developer, is going to construct the Netherlands' largest stand-alone Battery Energy Storage System (BESS). This groundbreaking 45MW/ 90MWh utility-scale BESS will be located in the port area of Dordrecht, on a 6000m² site and will be used for grid stabilization by storing excess energy from renewable sources.

Why is battery storage important for the Dutch electricity system?

This will provide more flexibility for the Dutch electricity system when the battery is put into operation in 2027. Battery storage enables electricity to be stored when there is more available than is needed, for example when a lot of solar and wind energy is generated.

Where is the battery energy storage system located?

Construction is underway on the battery energy storage system (BESS) which will be located beside a transformer station in Dronten, linked to the Windplan Groen wind power plant, where the electricity is brought together in a closed distribution system.

What is a fast battery energy storage system (BESS)?

Credit: RWE. RWE has commenced construction of an ultra-fast battery energy storage system (BESS) at its Moerdijk power plant in the Netherlands. The system, designed with an installed capacity of 7.5MW and a storage capacity of 11 megawatt hours (MWh), aims to enhance grid stability by providing or absorbing electricity within milliseconds.
