

# Thickness of solar panel roof

## Overview

---

How thick is a solar panel?

Most solar panels fall within a length range of 67.8 to 93.9 inches and a width range of 39 to 51.3 inches. Lower wattage panels tend to be on the smaller end of these ranges, while higher wattage panels tend to be larger. Solar panel thickness is relatively consistent, ranging from 1.18 inches to 1.57 inches. The most common depth is 1.38 inches.

How wide is a solar panel?

Solar panel width generally varies between 39.0 inches and 51.3 inches. A common width range of 39.1 to 41.5 inches encompasses many models across different wattages. Wider panels, such as those exceeding 44.5 inches, are often associated with higher wattage models. Depth (or Thickness):.

How much do solar panels weigh on a roof?

Residential solar panels typically weigh 40-46 pounds each. The complete system adds about 3-4 pounds per square foot to your roof's load. Can my roof support solar panels?

.

How deep is a solar panel?

The most common depth is 1.38 inches. Panel dimensions are influenced by wattage, cell technology, and panel design, which means sizes will always vary, even between panels with similar wattage or efficiency ratings. Understanding typical solar panel dimensions can help you plan your solar installation.
