

Three-phase financing for folding containers used in cement plants

Overview

How can low-carbon cement projects be delivered using carbon Contracts for difference?

How low-carbon cement projects can be delivered using Carbon Contracts for Difference (CCfDs). Carbon capture, utilisation and storage (CCUS) projects are capital intensive and involve substantial investment in CO₂ capture technology, transport and underground storage.

Are ccfd's a viable revenue stream for CCUS projects?

EU ETS prices traded around €70 - 80/t in the past six months, though they exceeded €100/t in the second quarter of 2022. CCfDs create a reliable revenue stream for CCUS projects by insulating them from market volatility.

Do ccfd's improve bankability of CCUS projects?

They are becoming more widespread, particularly in Asia, for example in Indonesia, which recently announced plans for a mandatory ETS. Several high-profile examples demonstrate how CCfDs enhance the bankability of CCUS projects by reducing financial risk and fostering private sector participation.

How can supplementary cementitious materials reduce reliance on fossil fuels?

This has been achieved through increasing the use of supplementary cementitious materials (SCMs) and significantly reducing reliance on fossil fuels by utilising waste fuels. Further work is underway in exploring decarbonated raw materials.
