Uninterruptible power supply for the Kyrgyzstan data center

Overview

What is a Mitsubishi Electric uninterruptible power supply?

Mitsubishi Electric Uninterruptible Power Supplies are designed to protect and secure customer data 24/7/365. Uninterruptible power supply systems are a core component of mission-critical data center infrastructures. At Mitsubishi Electric, we understand the risks associated with downtime in data centers – both to your finances and your reputation.

Why do data centers need a scalable UPS system?

Any fluctuation in performance can have a large impact on a data center provider, which is why we've created efficient, scalable UPS systems for data centers designed to deliver the right amount of power within milliseconds of power loss. Modular Application of Mitsubishi Electric's 9900D UPS.

Does your ups system work if your primary supply goes down?

Our UPS systems integrate seamlessly into data centers to deliver consistent, efficient power, even if your primary supply goes down. As technology advances, so does the demand for uninterrupted power. While there have been great advancements in the power grid, there are still vulnerabilities that allow for outages and fluctuations in flow.

Why should a data center use an ups?

A UPS with even 1% more efficiency can have a profound effect on power consumption and utility costs for a data center over the lifetime of the system. Our UPS are easy to install and deliver a higher power output in a smaller footprint, so you can maximize your white space by allocating the majority of your storage site to server equipment.
