# Which is better a 40-foot photovoltaic container or a traditional generator

## Overview

---

Are solar panels better than generators?

However, solar panels are quite adept at facilitating your existing power and effectively reducing your consumption and power bill. Generators, on the other hand, are far better at keeping individual devices running or charged up. This is especially necessary for emergency situations or during sustained power outages.

What is a portable generator & how does it work?

Portable generators don't distribute power across the grid, like solar panels, but to individual devices, or your primary necessities in the event of a sustained power loss. The larger and more efficient the generator, the more it can power and longer.

How many solar modules can be shipped in a 40-foot container?

The company said the new method allows for 558 of its 600 W+ modules, spread across 18 pallets, to be transported in a standard 40-foot container. Trina Solar said the change equates to a 12% increase in modules shipped inside each container, which in turn reduces shipping costs by 12% for each module.

Can a portable generator power multiple devices?

For as long as they have fuel, portable generators are capable of powering several, high-end devices. Portable generators don't distribute power across the grid, like solar panels, but to individual devices, or your primary necessities in the event of a sustained power loss.
