

# Which is better solar glass or acrylic

## Overview

---

Are acrylic windows better than glass?

Window glass is heavier, more prone to shattering but provides excellent clarity and UV protection. Acrylic windows, on the other hand, are made of a lightweight material that is more resistant to impact and less likely to shatter. However, they can be more prone to scratches and require specific window cleaning products.

Are acrylic windows scratch resistant?

Window glass is generally more scratch-resistant than acrylic. However, high-quality acrylic sheets also offer good scratch resistance. It's important to note that while both materials can be scratched, the scratches on acrylic windows can often be buffed out, unlike with glass windows.

Is acrylic sheet better than glass?

Acrylic sheet is also very hardwearing and will not discolour or weather, keeping its good looks for years. Finally, it's also good to know that acrylic sheet is much more affordable than standard glass. Advantages of glass over acrylic: is acrylic better than glass?

The main advantage that glass offers compared to acrylic is aesthetic.

What is the difference between acrylic and glass?

Constructions using glass are more stable than acrylic ones. Unlike acrylic, glass is not easily scratched and it is also inflammable and more resistant to heat. Thanks to its low weight, acrylic is very suitable for applications where saving weight is crucial, such as caravan and boat windows, roof lights and aquariums.
