

Working principle of rooftop solar energy storage cabinet

Overview

Is a battery energy storage planning model suitable for a rooftop PV system?

The optimal sizing of BES is mainly affected by the scale of PV generation and the energy trading mode. In addition, it is proved that the proposed algorithm can effectively obtain the global optimal solution. This article proposes a battery energy storage (BES) planning model for the rooftop photovoltaic (PV) system in an energy building cluster.

Can energy sharing be integrated with the BES planning model?

One innovative contribution is that a energy sharing mechanism is integrated with the BES planning model to study cooperative benefits between the PV owner and users, and meanwhile facilitate the reasonable installation of BES.

What are the benefits of a cooperative energy system (BES)?

The simulation results indicate that the cooperation operation increases revenues for the PV owner, decreases costs for users, and reduces the peak-to-valley difference of system load. The optimal sizing of BES is mainly affected by the scale of PV generation and the energy trading mode.
